# Memorandum on the Oregon State Police, the lead law enforcement agency for the State of Oregon

**By Karl M. Wright**

**May 11th 2026**

The Oregon State Police were founded on August 1st 1931 as a replacement for the State Highway Commission. The current Superintendent of the OSP is Casey Codding. The Oregon State Police crime lab in Salem has been hailed as Oregon's number one crime processing center.

The original intent was to have a full report dossier on the Oregon State Police, with direct first hand reports on various OSP activities. However, the Oregon State Police have been mostly missing in action since the launch of Operation Yellow Sentinel, and this is probably not a coincidence. The OSP has known since 2022 of my electronic espionage devices that are registered with a foreign government, and they probably know they are powerless to do anything about it. So evidently all they have left for themselves is to sit back and watch the fireworks show.

As has been documented in the April 27th 2026 report on the Multnomah County Sheriff's Office, the Oregon judiciary of the Oregon Circuit Courts for Multnomah County was hit with a cyber attack on April 27th 2026 at 1:52pm Pacific Daylight Time. This intrusion cross referenced data that was already in the Microsoft servers of the Portland Police Bureau, the Gresham Police Department and the Multnomah County Sheriff's Office. The ensuing result of this massive intrusion is that the evidence databases of the PPB, GPD and MCSO have been completely compromised by viruses, and all evidence contained in them is tainted. Considering the Oregon State Police Crime Lab has been tracking the espionage devices used to create this massive intrusion since 2022, the Salem crime lab is also tainted by software viruses.

As mentioned previously, the Oregon State Police have mostly gone missing in action, and in the OSP leadership void, the Portland Police Bureau seems to be spending more resources than any other Oregon agency on what might be considered signals intelligence. Of course, the PPB doesn't have the jurisdiction to actually do that sort of work. But it seems the gigantic leadership void in Oregon is forcing agencies into a massive mission creep that is pushing them way out of their league. For the Portland Police Bureau, it means they probably have more money in their budget than they need, otherwise they wouldn't be dedicating so many resources to such a massive mission creep. For one thing, the PPB is now ripe for a sting operation than exposes their wasteful spending. But for another thing, with the corruption of the Oregon Circuit Court databases, the PPB's legitimacy as a police organization is very much questionable. You can't have a functional law enforcement organization when you can't even bring any evidence into a courtroom due to massive evidence tainting.

It seems like the OSP, PPB and MCSO have the mode of operation where they just ignore the massive hack and just hope that no one finds out. It's that kind of thinking that the Japanese Empire had right before they got nuked.

# Oregon State Police

The **Oregon State Police** (**OSP**) is a law enforcement agency of the U.S. state of Oregon. The OSP enforces all of Oregon's criminal laws and assists local law enforcement agencies. Casey Codding has served as Superintendent since February 2023.[4] In addition to the Patrol Division, OSP has a Criminal Division (detectives, arson, explosives), SWAT, DPU (Dignitary Protection Unit), MRT (Mobile Response Team), a Forensic Services Division (crime labs), a Fish and Wildlife Division (game wardens), a Medical Examiner's Division, and it is one of the few law enforcement agencies in the United States that monitors the security of the state lottery. Oregon State Police has primary jurisdiction on state highways and all other state owned property. It also frequently responds to incidents in rural areas when local agencies lack capacity or otherwise require assistance.

## History

The Oregon State Police began operating on August 1, 1931. The organization was designed by a committee appointed by Governor Julius L. Meier,[5] who made a survey of some of the most successful state law enforcement agencies across North America, including the Royal Canadian Mounted Police, the New Jersey State Police, the Texas Rangers, the Pennsylvania State Police, and others. They took on the responsibilities that were previously handled by the State Highway Commission, the Fish and Game Commission, the Secretary of State, the Prohibition Commissioner, and the State Fire Marshal. OSP's first Superintendent (head) was Charles Pray, State Parole Officer and a former Department of Justice Agent. Mr. Pray set up four OSP districts in the state and thirty-one patrol stations. He began his duties on June 7, 1931, about two months before the State Police began operating.

## Services

A Ford Crown Victoria Police Interceptor of the Oregon State Police parked at the Oregon State Capitol in April 2007.

### Criminal Investigation Division

- This division's primary duty is to assist other law enforcement agencies throughout the state of Oregon with Criminal Justice Investigations. Within the Criminal Investigation Division there are sub-divisions, those are Major Crimes Section; Drug Enforcement Section; Arson/Explosives Section; and Investigative Reports Section. Members of the Criminal Division participate on teams with more than 40 local, county, and federal agencies.[6]

### Fish and Wildlife

- The Fish and Wildlife division primarily enforces laws and ordinances protecting Oregon wildlife and natural resources, though the Fish and Wildlife troopers also enforce traffic code and all other Oregon criminal laws.[7]

## Recent changes

In 1993, the Oregon Legislature approved legislation that included the previously autonomous organizations of the Oregon State Fire Marshal's Office, Law Enforcement Data System, Oregon Emergency Management, and the Oregon Boxing and Wrestling Commission within the Department of State Police.

As of late 2018 the agency has been transitioning to the Smith & Wesson M&P 2.0 9MM to replace their current Smith & Wesson M&P .40 S&W sidearms.

The Multnomah County Sheriff's Office, the primary law enforcement entity for the largest county in Oregon, was founded in 1854, predating Oregon statehood. William L. McMillen was the first Sheriff of Multnomah County, and served until 1858. Addison M. Starr was the first Multnomah County Sheriff under the statehood of Oregon. The current Sheriff of Multnomah County is Nicole Morrisey O'Donnell. The MCSO has had its fair share of controversies, including the resignation of Bernie Giusto, and the Dan Staton retaliations, amongst others. The MCSO provides law enforcement services in unincorporated areas of Multnomah County and in towns that are too small to fund their own city police departments.

The main subject of this report is the first hand observations and documentation that the writer of this report has made. In the interest of full disclosure, my sister's husband was at least at one time employed by the Multnomah County Sheriff's Office. It is unclear if this is still the case, as active duty commitments with the United States Military have stationed him overseas quite a bit. It is noted for the record. This is the second version of this report. This second version was necessitated because additional logs and signals intelligence on the MCSO has been recorded since the first version.

My personal interactions with the Multnomah County Sheriff's Office date back to 1991. Over the last thirty five years, a variety of different interaction have happened. For multiple decades, I maintained a valid and active Concealed Weapon Permit that was issued by the Multnomah County Sheriff's Office. Most of my interactions with the Multnomah County Sheriff's Office during this time were as a gun rights supporter and also a law enforcement supporter. My opinions on gun rights and also support for law enforcement has drastically changed over the last decade or so. Now, I support strict gun control and also police abolition. I acknowledge that the Second Amendment of the United States Bill of Rights guarantees a right to bear arms, and I note that the 2nd Amendment specifically says ARMS, not guns. My personal opinion is that bladed weapons are more than adequate for self defense, and are much less likely to injure innocent bystanders compared to firearms. But I also want to point out that the ambiguous ARMS specified in the 2nd Amendment should also include digital arms and weapons, such as hacking tools and cyberwarfare equipment. The great thing about the Second Amendment is that the Founding Fathers didn't paint themselves into a corner by specifying exactly what constitutes arms and armaments.

As has been recorded in the latest Portland Police Bureau report that is external to this report, Operation Yellow Sentinel was launched on March 5th 2026. Operation Yellow Sentinel is a cyberwarfare initiative designed to sabotage American law enforcement activities. Operation Yellow Sentinel was expanded to nominally include the Multnomah County Sheriff's Office on April 21st 2026, at least in online data incursions. Operation Yellow Sentinel launched a data intrusion into the MCSO computer networks on April 21st 2026, thereby involving the Multnomah County Sheriff's Office. It is unclear at this time if anti-hacking software and Cybersecurity measures prevented any significant damage to the Multnomah County Sheriff's Office computer networks or not. But based on several days worth of data, it appears the damage is very limited in scope. However, there was an observed flurry of activity on April 22nd from the Oregon State Police in tracking my traveling, most likely because of the MCSO incursion. Because the electronic devices that generate Operation Yellow Sentinel are registered with a foreign government as espionage devices, they cannot be used as evidence in any court in the United States due to diplomatic immunity restrictions. Therefore, the data generated by Operation Yellow Sentinel is designed to be a poison pill; something that can't be used as evidence but will cause law enforcement organizations to force an issue that they can't possibly succeed in. In this case, one of the main goals of Operation Yellow Sentinel is to poison the well of the Oregon court system.

On April 27th 2026, Operation Yellow Sentinel was expanded to include Oregon Circuit Court Judges Kami J. White and Maurisa R. Gates, among others. These are judges assigned to Multnomah County by the Oregon courts. This marks the first incursion directly into the Oregon court systems by attacking the judicial branch directly. Fair warnings were given that this was the intended direction of Operation Yellow Sentinel, and evidently the Multnomah County Sheriff's Office, the Oregon State Police, and the FBI are either unwilling or unable to confront the facts that surround my foundation of operating success.

Burying ones head in the sand isn't a particularly good strategy when you're being hammered by a cyber attack. It remains unclear if the fact that I have diplomatic protection from the Republic of Finland, being quite a bit of necessary intelligence, is completely unavailable to anyone in the state of Oregon or the FBI – or if they are intentionally choosing to ignore this relevant bit of information. As mentioned on the previous page, the Oregon State Police seem to have taken a bit of interest in Operation Yellow Sentinel since the first release of my MCSO report. Most likely because the MCSO has called in help from the OSP, since this is clearly above their pay grade. Obviously Operation Yellow Sentinel is way above the pay grade of the OSP as well, but a lack of jurisdictional respect is one of the reasons why Operation Yellow Sentinel was launched in the first place. It is astonishing that the United States federal government seems to be completely asleep at the wheel, and taking no actions whatsoever that would prevent the continual expansion of Operation Yellow Sentinel. But America's loss is my gain it seems, and I'm willing to continue giving America a death by a thousand cuts.

Considering the close working relationship the Multnomah County Sheriff's Office has with the Multnomah County District Attorney's Office, it would be logical to assume that both the MCSO and the MCDA were well aware and familiar with Operation Yellow Sentinel long before it was expanded to hit the Judicial branch directly. Enough of the public communities of Multnomah County were hit directly by Operation Yellow Sentinel since March 5th 2026 that there should have been more than ample law enforcement monitoring of where the data was coming from. This is basic signals intelligence work. And Operation Yellow Sentinel was generating more than enough signals intelligence before April 21st 2026 for the FBI to be involved in this. Again, this is basic signals intelligence work. It is a strong sign that the United States is approaching Failed State status when entire federal agencies are asleep at the wheel and unable to correctly characterize as big of a cyberwarfare operation as Operation Yellow Sentinel.

Multnomah County has a serious problem with homelessness, and instead of addressing the root causes of evictions, which are poverty and inequality – and addressing these would prevent homelessness in the first place – Multnomah County, like most large counties around the country, continues to take a business-as-usual approach. Capitalism does a good job of making sure that American marginalized communities stay marginalized, and can obtain no power whatsoever to successfully mount a challenge to the power structures that keep them in poverty. And the Multnomah County Sheriff's Office is all to happy to go along with maintaining the power structures of the bourgeois, because it keeps them well paid.

The Multnomah County Sheriff's Office is tasked with removing tenants who have been evicted from their residence by the Circuit Court of the State of Oregon for the county of Multnomah. Removing tenants can be dangerous work, and occasionally there have been gun fights between tenants and Multnomah County Sheriff's Deputies when the tenants refused to go without a fight. It is unclear exactly who foots the bill for all the thousands of evictions that happen in Multnomah County every year. The long term costs are even more severe, as the homeless population balloons further and further every year, and the band aids that are completely ineffective in actually addressing homelessness do nothing to stop the skyrocketing problem.

This is why my personal philosophy regarding law enforcement is police abolition. It is so noted for the record, and I admit that puts a certain bias on my signals intelligence work. But my philosophy is based on scientific and historical research. Humans in the prehistoric ages lived for hundreds of thousands of years without a need for a security guard caste, and they evolved into the modern humans we have today. Even the ancient Egyptian, Greek and Roman societies didn't have law enforcement per se. They had standing armies that performed some rudimentary level of policing in the abstract sense, but they were military not LE. If you distill the drift in civilization for the last five thousand years, the need for specific law enforcement agencies arose from the need to protect landowners from the mobs of peasants that tended to get unruly.

Under modern capitalism, law enforcement exists to keep the masses of citizens from taking the property of the bourgeois by force. However, and especially in America, the ingrained dependence on the capitalistic mode of economy by the United States citizens at large keeps them living in fear. They fear that without police, they would be robbed and murdered. This is of course illogical, and police unions do a good job exploiting that fear and manipulating it for their own purposes. The end result is that most Americans have a hard time wrapping their mind around the concept of police abolition.

In some respects I am more of an activist than an analyst, and in my unique circumstances I blur those lines very drastically. I've been a data analyst and computer programmer for over forty years, and my abilities in intelligence parsing spans decades. My dedication to social activism is much more recent, but I've paired the two quite successfully. I put in the hard work of forcing issues that I believe in, at risk of life and limb. As has been alluded to in other dossiers, I have hacked into and shut down the entire computer networks of a foreign police organization. The resulting diplomatic embarrassment caused the US State Department to cover the event up. The State Department didn't tell the FBI however, and they sent a swarm of FBI agents to that foreign country a couple months later, to force a prosecution that was already legally thrown out and covered up. In the process, I conspired with that foreign government to entrap the FBI acting on their worst impulses, and thoroughly document corruption and misbehavior by American federal agencies. This foreign government still has all the evidence of that entrapment operation. This enraged American leaders even further, and the end result was that I was given diplomatic cover and diplomatic immunity to protect me from the wrath of American leadership. I flew back to America from that country on August 29th 2022 aboard the President of that country's jet, with a full diplomatic escort. It seems to be hard for people in America to wrap their minds around these facts, but I have full diplomatic protection from a foreign government, and nothing that anybody does in America can change that fact. Nothing.

It is very, very questionable why the FBI and Homeland Security have not informed the Multnomah County Sheriff's Office about this constant risk of evidence tainting. The United States federal law enforcement entities should have enough information by now to know fully well what is going on with my signals intelligence gathering, even if they don't have the top level security clearance needed to directly verify my status as a foreign agent. At the present and as of this writing, the Multnomah County Sheriff's Office and Homeland Security seem to have a rather acrimonious relationship, and maybe this contributes to the lack of communication on the part of the federal agencies in conjunction with state, county and city law enforcement agencies. In 2026 there have been many instances in both Portland and across the United States of America where federal law enforcement was actively hostile towards local police agencies and communities. However, this lack of communication puts the entire American public at risk, because legitimate law enforcement and public safety work is being jeopardized by political football and jurisdictional shell games.

The United States is experiencing tremendous political and social upheaval right now, and perhaps these gaping holes in law enforcement work are just par for the course. If so, these issues are symptoms that the United States is well on its way to Failed State status, and after that, law enforcement becomes the judge, jury and executioner. And that is certainly a shameful end to a once-great nation.

As for the Multnomah County Sheriff's Office, my current strategy and goal is not the abolition of the MCSO. That is a matter for democratic processes, and only the voters and people themselves should decide such things. In a democracy, you can't force an issue that the voters themselves don't want. However, I work to collect signals intelligence on Oregon and the United States for the benefit of the international diplomatic community and especially European Union member states. If the MCSO interferes with that work, they might find their organization delegitimatized, and unable to bring evidence into a court because it got tainted by international espionage. If that event comes to pass, and the Multnomah County Sheriff's Office becomes unable to function in courtrooms as a law enforcement entity, the only ones to blame would be the officers in the MCSO that didn't respect the rules of international law, and inserted themselves into a situation where they have no jurisdiction. International espionage is way above the pay grade of any employees in the city of Portland, be they in the MCSO or mayor's office. That should be obvious, but apparently it is not.

The Portland Police Bureau, also known as PPB, is the primary city level law enforcement agency for the city of Portland in Oregon, USA. Founded in 1870, the current chief of the PPB is Bob Day, who has served in this capacity since October 11th 2023. Most of the PPB rank-and-file employees are represented by the Portland Police Association union. The PPA union has had its share of controversies. As with most unions, it fights to protect the wages and benefits of its employees. However, since a police union represents employees who are in the public eye and are subject to the scrutiny of public trust, the PPA has a special obligation to uphold community confidence and honor – an obligation that is well beyond most unions. On this front, the PPA has been much more aggressive in its tactics than a public trust organization should. The cases in point have been spread across many news headlines in the Portland area, and it has led to calls for more oversight. It should be noted that Chief Bob Day is a graduate from George Fox University, which is a Christian-centric university. It can be assumed from this that Chief Day holds a Christian worldview, however categorized it may be.

But the main subject of this report is the first hand observations and documentation that the writer of this report has made. This is the sixth version of this report. Additional observations and logs have been recorded that necessitate this sixth version. It is blatantly clear that the spirit of American Exceptionalism is preventing the PPB from understanding the predicament they are in with these reports. American belief in their own superiority is an unquenchable fire of stupidity, evidently.

Because of the lack of respect for international law and jurisdictional boundaries, Operation Yellow Sentinel was launched, a cyberwarfare initiative designed to sabotage American law enforcement activity. Operation Yellow Sentinel was launched on March 5th 2026, and will continue until such time as the goals that necessitated its launch are accomplished. Already, Operation Yellow Sentinel has accomplished one of its main goals, which is to poison the well of the Oregon court system. Portland community members have become collateral damage by Operation Sentinel, and they are demanding justice from the PPB. But there will be no justice for them, because the electronic devices that generated Operation Yellow Sentinel are registered espionage devices with a foreign government, and cannot be used in American courts as legal evidence. And the more the PPB pushes the issue that's fundamentally unavailable to them, the closer the PPB gets to insolvency as a law enforcement organization. It is believed that already the PPB has created affidavits and legal court documents as a reaction to Operation Yellow Sentinel and the community outcry it has caused. Again, these documents were specifically designed to be poison pills, something that can't be used as evidence but will cause the PPB to attempt to force an issue that they can't succeed in.

My personal philosophy regarding law enforcement is police abolition. It is so noted for the record, and I admit that puts a certain bias on my signals intelligence work. But my philosophy is based on scientific and historical research. Humans in the prehistoric ages lived for hundreds of thousands of years without a need for a security guard caste, and they evolved into the modern humans we have today. Even the ancient Egyptian, Greek and Roman societies didn't have law enforcement per se. They had standing armies that performed some rudimentary level of policing in the abstract sense, but they were military not LE. If you distill the drift in civilization for the last five thousand years, the need for specific law enforcement agencies arose from the need to protect landowners from the mobs of peasants that tended to get unruly. Under modern capitalism, law enforcement exists to keep the masses of citizens from taking the property of the bourgeois by force. However, and especially in America, the ingrained dependence on the capitalistic mode of economy by the United States citizens at large keeps them living in fear. They fear that without police, they would be robbed and murdered. This is of course illogical, and police unions do a good job exploiting that fear and manipulating it for their own purposes. The end result is that most Americans have a hard time wrapping their mind around the concept of police abolition.

In some respects I am more of an activist than an analyst, and in my unique circumstances I blur those lines very drastically. I've been a data analyst and computer programmer for over forty years, and my abilities in intelligence parsing spans decades. My dedication to social activism is much more recent, but I've paired the two quite successfully. I put in the hard work of forcing issues that I believe in, at risk of life and limb. As has been alluded to in other dossiers, I have hacked into and shut down the entire computer networks of a foreign police organization. The resulting diplomatic embarrassment caused the US State Department to cover the event up. The State Department didn't tell the FBI however, and they sent a swarm of FBI agents to that foreign country a couple months later, to force a prosecution that was already legally thrown out and covered up. In the process, I conspired with that foreign government to entrap the FBI acting on their worst impulses, and thoroughly document corruption and misbehavior by American federal agencies. This foreign government still has all the evidence of that entrapment operation. This enraged American leaders even further, and the end result was that I was given diplomatic cover and diplomatic immunity to protect me from the wrath of American leadership. I flew back to America from that country on August 29th 2022 aboard the President of that country's jet, with a full diplomatic escort. It seems to be hard for people in America to wrap their minds around these facts, but I have full diplomatic protection from a foreign government, and nothing that anybody does in America can change that fact. Nothing.

Personal interactions with the PPB over the last two years would be categorized as professional and courteous. In many cases however, the involvement of the PPB in the situation is a matter of open question. The interaction with the PPB during a personal protest was legitimately necessary, to verify the safety of the protest and the concerns of the community. However, many other proximity interactions have been something of a curiosity. The situations almost appear as a matter of documenting location and travel. If this is indeed the case, it is very ill advised, since nothing that a city law enforcement department gathers would be usable to them. Due to my status as a foreign agent with diplomatic immunity granted by an external government, nothing they procure would ever see the light of day in court.

Furthermore, and maybe more damning, these interactions are recorded by myself on electronic devices that are registered with a foreign state as legitimate espionage devices. Any documentation gathered on these devices is signals intelligence data, and unavailable in any way, shape or form as law enforcement evidence. Anytime and every time a PPB employee allows themselves to be documented with one or more of these signals intelligence devices, they run a very significant risk of anything they were trying to document as law enforcement evidence being inadmissible in any court due to national security considerations. This pertains to anything happening around me, even if it doesn't nominally have anything to do with me otherwise.

It is very, very questionable why the FBI and Homeland Security have not informed the Portland Police Bureau about this constant risk of evidence tainting. The United States federal law enforcement entities should have enough information by now to know fully well what is going on with my signals intelligence gathering, even if they don't have the top level security clearance needed to directly verify my status as a foreign agent. At the present and as of this writing, the Portland Police Bureau and Homeland Security seem to have a rather acrimonious relationship, and maybe this contributes to the lack of communication on the part of the federal agencies in conjunction with state, county and city law enforcement agencies. In 2026 there have been many instances in both Portland and across the United States of America where federal law enforcement was actively hostile towards local police agencies and communities. However, this lack of communication puts the entire American public at risk, because legitimate law enforcement and public safety work is being jeopardized by political football and jurisdictional shell games.

The United States is experiencing tremendous political and social upheaval right now, and perhaps these gaping holes in law enforcement work are just par for the course. If so, these issues are symptoms that the United States is well on its way to Failed State status, and after that, law enforcement becomes the judge, jury and executioner. And that is certainly a shameful end to a once-great nation.

As for the Portland Police Bureau, my current strategy and goal is not the abolition of the PPB. That is a matter for democratic processes, and only the voters and people themselves should decide such things. In a democracy, you can't force an issue that the voters themselves don't want. However, I work to collect signals intelligence on Oregon and the United States for the benefit of the international diplomatic community and especially European Union member states. If the PPB interferes with that work, they might find their organization delegitimatized, and unable to bring evidence into a court because it got tainted by international espionage. If that event comes to pass, and the Portland Police Bureau becomes unable to function in courtrooms as a law enforcement entity, the only ones to blame would be the officers in the PPB that didn't respect the rules of international law, and inserted themselves into a situation where they have no jurisdiction. International espionage is way above the pay grade of any employees in the city of Portland, be they in the PPB or mayor's office. That should be obvious, but apparently it is not.

The Gresham Police Department was founded in approximately 1905, with J.D. McMillian contributing to the early history of Gresham law enforcement. The current Chief of Police is Travis Gullberg, who has served in this capacity since 2021. According to various public information sources, the GPD has an officer police force of less than a hundred officers, with closest estimates in the eighty officer range. The main subject of this report is the first hand observations and documentation that the writer of this report has made. The Gresham Police Department has been under observation by the writer of this report since August of 2022. Direct observations of the GPD was significantly scaled back by the writer of this report in March of 2024, due to relocation out of Gresham and into the City of Portland itself.

In September of 2022 Kevin Dahlgren was observed and documented on numerous occasions, well before he was publicly accused of identity theft and public misconduct. Evidence of this is retained in many archived files created by the writer of this report. Kevin Dahlgren was photographed and documented associating with GPD officer Godfrey on numerous occasions during this time. It is unknown if officer Godfrey was part of the investigation into Mr. Dahlgren, or if officer Godfrey was himself engaging in public misconduct.

Most of the documented observations involving the GPD involve public interactions with homeless people around Gresham City Hall, with a few drunks and rowdies thrown in the mix. The characterizations of these interactions would be that generally the GPD officers are less courteous and professional than officers with the Portland Police Bureau. It is unclear if this is because Portland has a much bigger budget for officer training or if there are other contributing factors to this observation. GPD seems to devote much more time and attention towards recognition of the United States military branches and armed services culture than the PPB. One has to wonder if the GPD considers itself more of a quasi-military organization and less of a public safety organization. This is an erroneous assumption that many police departments around the United States make.

As has been recorded in the latest Portland Police Bureau report, Operation Yellow Sentinel was launched on March 5th 2026. Operation Yellow Sentinel is a cyberwarfare initiative designed to sabotage American law enforcement activities. Operation Yellow Sentinel was expanded to nominally include the Gresham Police Department on April 5th 2026, at least in online data incursions. Operation Yellow Sentinel launched a data intrusion into the Gresham-Barlow school district on April 5th 2026, thereby theoretically involving the Gresham Police Department. It is unclear at this time if anti-hacking software and Cybersecurity measures prevented any significant damage to the Gresham-Barlow school district computer networks or not. Because the electronic devices that generate Operation Yellow Sentinel are registered with a foreign government as espionage devices, they cannot be used as evidence in any court in the United States due to diplomatic immunity restrictions. Therefore, the data generated by Operation Yellow Sentinel is designed to be a poison pill; something that can't be used as evidence but will cause law enforcement organizations to force an issue that they can't possibly succeed in. In this case, one of the main goals of Operation Yellow Sentinel is to poison the well of the Oregon court system.

My personal philosophy regarding law enforcement is police abolition. It is so noted for the record, and I admit that puts a certain bias on my signals intelligence work. But my philosophy is based on scientific and historical research. Humans in the prehistoric ages lived for hundreds of thousands of years without a need for a security guard caste, and they evolved into the modern humans we have today. Even the ancient Egyptian, Greek and Roman societies didn't have law enforcement per se. They had standing armies that performed some rudimentary level of policing in the abstract sense, but they were military not LE. If you distill the drift in civilization for the last five thousand years, the need for specific law enforcement agencies arose from the need to protect landowners from the mobs of peasants that tended to get unruly. Under modern capitalism, law enforcement exists to keep the masses of citizens from taking the property of the bourgeois by force. However, and especially in America, the ingrained dependence on the capitalistic mode of economy by the United States citizens at large keeps them living in fear. They fear that without police, they would be robbed and murdered. This is of course illogical, and police unions do a good job exploiting that fear and manipulating it for their own purposes. The end result is that most Americans have a hard time wrapping their mind around the concept of police abolition.

The United States is experiencing tremendous political and social upheaval right now, and perhaps these gaping holes in law enforcement work are just par for the course. If so, these issues are symptoms that the United States is well on its way to Failed State status, and after that, law enforcement becomes the judge, jury and executioner. And that is certainly a shameful end to a once-great nation.

As for the Gresham Police Department, my current strategy and goal is not the abolition of the GPD. That is a matter for democratic processes, and only the voters and people themselves should decide such things. In a democracy, you can't force an issue that the voters themselves don't want. However, I work to collect signals intelligence on Oregon and the United States for the benefit of the international diplomatic community and especially European Union member states. If the GPD interferes with that work, they might find their organization delegitimatized, and unable to bring evidence into a court because it got tainted by international espionage. If that event comes to pass, and the Gresham Police Department becomes unable to function in courtrooms as a law enforcement entity, the only ones to blame would be the officers in the GPD that didn't respect the rules of international law, and inserted themselves into a situation where they have no jurisdiction. International espionage is way above the pay grade of any employees in the city of Gresham, be they in the GPD or mayor's office. That should be obvious, but apparently it is not.

I decided to just go to court and not really do anything, and accept the way things go. Last time it took two months after the eviction for the Multnomah County Sheriff's deputies to kick us out. That's plenty of time to find a new place.

Plus, if I stand in court in front of a judge that I previously annihilated, the judgement won't be valid because she shouldn't have ruled in a case in which she is also a victim. It's a conflict of interest and ethics violation. It will be grounds for appeal.

But more importantly, it will give me the foundation to destroy the Oregon State Police and completely delegitimize them. If everything I do is going to be completely covered up anyway, I might as well start gunning for the Oregon State Police. After I destroy the Oregon State Police, all the citizens of Oregon get a Get Out Of Jail Free card.

I just realized, this would also mean that every eviction that judge ever made would be invalidated on ethics violation grounds. Thousands of homeless people would be given relief. I really like this strategy!

**Helmi Niinisto** <helminiinisto4@gmail.com> Tue, Apr 28, 2026 at 8:51 AM
To: yellowsentinel2@gmail.com <yellowsentinel2@gmail.com>

On Monday, April 27th at 1:52pm Pacific Daylight Time, Operation Yellow Sentinel - a cyber warfare initiative - launched an intrusion into the Oregon Circuit Court computer networks. This intrusion cross referenced data in the Microsoft servers of the Portland Police Bureau, the Gresham Police Department and the Multnomah County Sheriff's Office.

The ensuing result of this massive intrusion is that the evidence databases of the PPB, GPD and MCSO have been completely compromised by viruses, and all evidence contained in them is tainted. Any use of any evidence contained in these compromised databases should be inadmissible in any court due to the evidence tainting.

The defense attorneys of Multnomah County need to be informed of the Multnomah County District Attorney's office inability to bring any cases to trial due to this massive evidence tainting.
